

# Fuel Saving Measures

1. Plan your trip well to avoid consuming more fuel than necessary
2. Check your tire pressure to reduce fuel fuel
3. Clean out your car and leave only

# Fuel Types

- Liquid Fuels
- Gaseous Fuels
- Solid Fuels
- Solar oil
- Gasoline

# Fuels Information

Definition: Coal, petroleum, natural gas

Solid Fuels: Coal, Petroleum, Natural Gas

Liquid fuels: petroleum derivatives (diesel, gasoline, kerosene,...) and alcohols (methanol, ethanol,...).

Solid fuels: coal (mineral and vegetable), coke and biomass.

# Gasoline characteristics

Natural or primary gasoline is made up of the right number of carbons, but the way they are arranged within the molecule does not give it a good octane rating. To improve the quality of this gasoline, there are two types of processes in refineries, which are isomerization and reformation.
